Recall on six-node Tree-in tasks

One row per model; 100 planned tasks per condition

Model	K1 Source cards	K3 Destination cards	K4 Both cards	K7 Direct query
Gemma-4-31B	0.972	0.983	0.982	0.982
Qwen3.6-Flash	0.603	0.603	0.802	0.660
Ministral-14B	0.853	0.787	0.908	0.837

K1/K3/K4 use the procedural query; K7 uses source cards with a direct query.

Saved macro means over all planned tasks; invalid outcomes contribute zero.

Ministral valid counts: K3 = 99/100, K7 = 91/100; all other cells = 100/100.
